Type of farm: Dairy and cheesemaking

Date placement available: End 2023

This dairy farm offers a nice training where they milk about 200 cows and associated young stock. In 2014, they commissioned their new barn with 26-stall rotary milking parlour. The approximately 100 hectares of grassland are largely farmed in-house. Due to the many diverse operations and different seasons, many sides of their profession can be seen during the training. Of course, the basis remains cow care, milking and land work. In spring and summer, they also do meadow bird management and manage natural land. But they are always optimise everything and there is also a lot to see and experience about this. Because of this broad package, together you can see where to go deeper and what your interests are. Furthermore, they are always open about their way of farming and their future plans. In short, in addition to the standard activities, together you can further explore what moves and interests you.
